

Student name: anas malik obeidat

What are the differences between the following HTML tags?

- strong, b
- strike, del
- cite, em, i

 is for strong importance, whereas is for stylistic offset without conveying additional meaning, and too of them make the text bold

- <strike> Represents strikethrough text. It is a deprecated HTML tag, and its use is discouraged in favor of using CSS for styling.; is recommended for indicating deleted text.

<cite>: Represents the title of a creative work, such as the title of a book, movie, or other creative piece. It is used to reference the source of information.

: Represents emphasized text. It is often displayed in italics, but its primary purpose is to convey emphasis to both browsers and assistive technologies. It does not imply a change in meaning but emphasizes the importance of the enclosed text.

<i>: Represents text in an alternate voice or mood, or it can be used for technical terms, foreign language phrases, etc. It is often displayed in italics. Unlike , it doesn't necessarily imply emphasis and is more about changing the text's style.
